

GENG-1201 W26: RFP Amendments/Clarifications

Amendment:

The catapult system may not exceed the robot car's **width**, but it may exceed its length and height (i.e., there is now only a constraint on the width of the catapult).

Clarifications

Design: Any catapult-style mechanism is acceptable (traditional, trebuchet, ballista, etc.), as long as it is mechanically driven. Different forms of mechanical energy storage are allowed, but chemical energy, compressed air, or any dangerous materials are not permitted.

Modification of Robot Car: Students are allowed to add parts to the robot car as long as the structure is not damaged. They are not permitted to remove any existing components.

Boards, Sensors, and Motors: Students are allowed to use extra boards, sensors, and motors.

Number of balls: The device must use exactly three balls. Loading more than three is not allowed.

Target and range: The target size for the catapult is a **rectangular basket of 30 × 40 cm**, positioned **3 meters away** from the robot car.

Incline: There will be no incline on the course.
